

Bootstrap (v4.5)

Bootstrap is a free and open-source **CSS framework** directed at **responsive, mobile-first front-end** web development. It contains CSS- and (optionally) JavaScript-based design templates for typography, forms, buttons, navigation, and other interface components.

In Bootstrap, we Optimize code for mobile devices first and then scale up components as necessary using CSS media queries.

Integration >>

1. Downloading from <https://getbootstrap.com/docs/4.5/getting-started/download/> and using the necessary scripts.

2. Using CDN,

Bootstrap requires the use of the HTML5 doctype.

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <!-- Required meta tags -->
    <meta charset="utf-8">
    <meta name="viewport"
          content="width=device-width, initial-scale=1, shrink-to-fit=no">

    <!-- Bootstrap CSS -->
    <link rel="stylesheet"
          href="https://stackpath.bootstrapcdn.com/bootstrap/4.5.0/css/bootstrap.min.css"
          integrity="sha384-9aIt2nRpC12Uk9gS9baDl411NQApFmC26EwAOH8WgZl5MYYYxFfc+NcPb1dKGj7Sk"
          crossorigin="anonymous">

    <title>Bootstrap CDN</title>
  </head>
  <body>
    <h1>Hello, world!</h1>

    <!-- jQuery first, then Popper.js, then Bootstrap JS -->
    <script src="https://code.jquery.com/jquery-3.5.1.slim.min.js"
            integrity="sha384-DfXdz2htPH0lsSSs5nCTpuj/zy4C+OGpamoFVy38MVBnE+IbbVYUew+OrCXaRkfj"
            crossorigin="anonymous"></script>

    <script src="https://cdn.jsdelivr.net/npm/popper.js@1.16.0/dist/umd/popper.min.js"
            integrity="sha384-Q6E9RHvbIyZFJoft+2mJbHaEWldlvI9IOYy5n3zV9zzTtmI3UksdQRVvoxMfooAo"
            crossorigin="anonymous"></script>

    <script src="https://stackpath.bootstrapcdn.com/bootstrap/4.5.0/js/bootstrap.min.js"
            integrity="sha384-OgVRvuATP1z7JjHLkuOU7Xw704+h835Lr+6QL9UvYjZE3Ipu6Tp75j7Bh/kR0JKI"
            crossorigin="anonymous"></script>
  </body>
</html>
```

To ensure proper rendering and touch zooming for all devices.

Add this stylesheet link into the **<head>** section before all other stylesheets.

Many of the Bootstrap components require the use of JS to function. So place these scripts right before the closing **</body>** tag.

jQuery must come first, then Popper.js and then Bootstrap JS plugin.

Grid Layout >>

1. Container:

.bg-white

.bg-transparent

.text-primary

.text-secondary

.text-success

.text-danger

.text-warning

.text-info

.text-light

.text-dark

.text-body

.text-muted

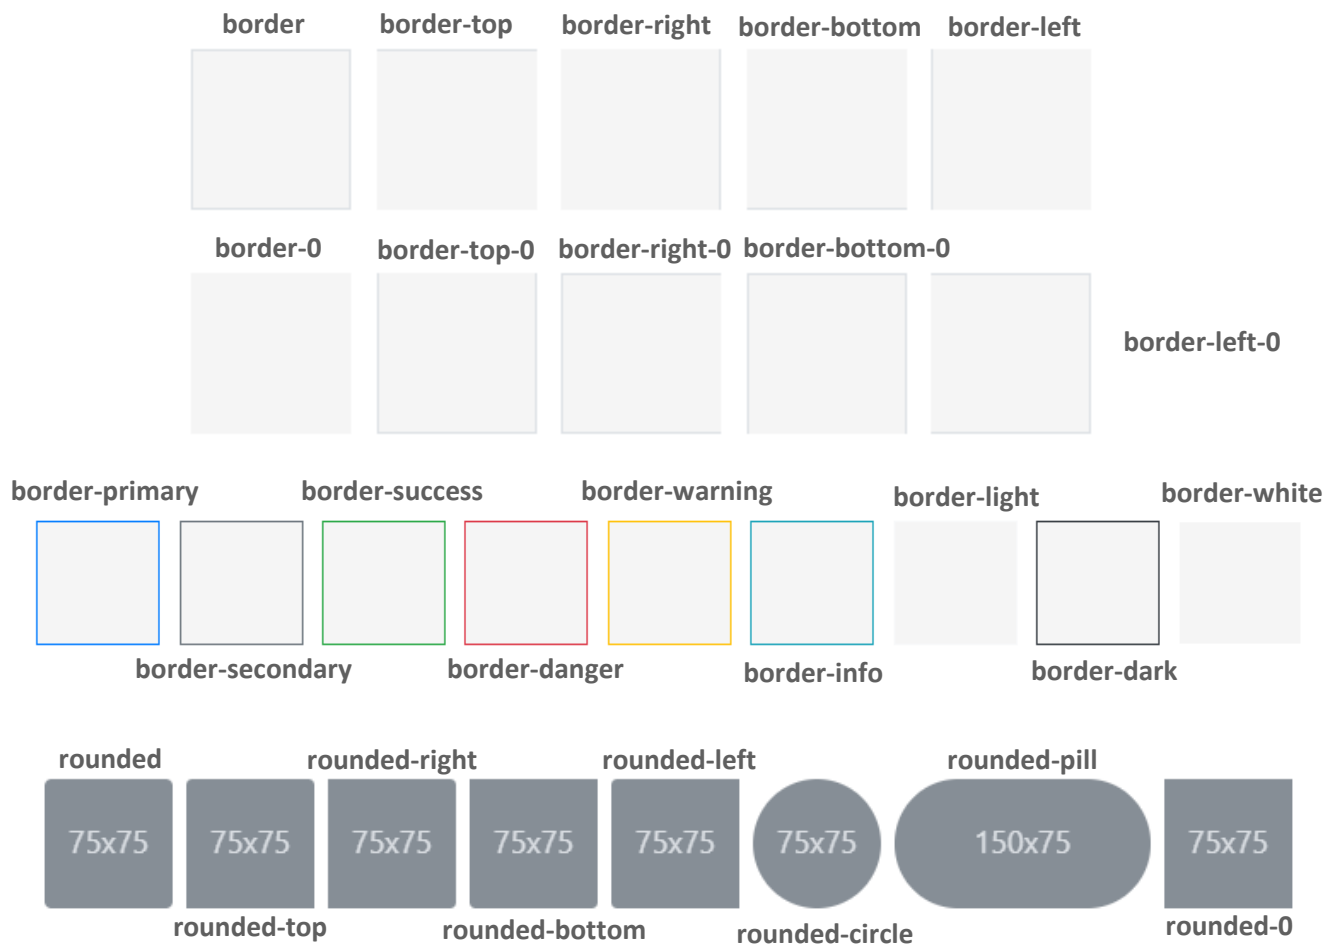

.text-white

.text-black-50

.text-white-50

	Extra small <576px	Small ≥576px	Medium ≥768px	Large ≥992px	Extra large ≥1200px
.container	100%	540px	720px	960px	1140px
.container-sm	100%	540px	720px	960px	1140px
.container-md	100%	100%	720px	960px	1140px
.container-lg	100%	100%	100%	960px	1140px
.container-xl	100%	100%	100%	100%	1140px
.container-fluid	100%	100%	100%	100%	100%

2. Grid System:

	Extra small <576px	Small ≥576px	Medium ≥768px	Large ≥992px	Extra large ≥1200px
Max container width	None (auto)	540px	720px	960px	1140px
Class prefix	.col-	.col-sm-	.col-md-	.col-lg-	.col-xl-
# of columns	12				
Gutter width	30px (15px on each side of a column)				
Nestable	Yes				
Column ordering	Yes				

- **Variation – 1**

- Equal Width** – (col, col, col), (col-sm, col-sm, col-sm), (col-md, col-md, col-md),
- Equal Width Multi Line** – (col, col, w-100, col, col), (col-sm, col-sm, w-100, col-sm),
- One Column Width** – (col, col-6, col), (col-sm-2, col-sm, col-sm-5, col-sm),
- Variable Width Grid** – (col, col-md-auto, col-md-2)

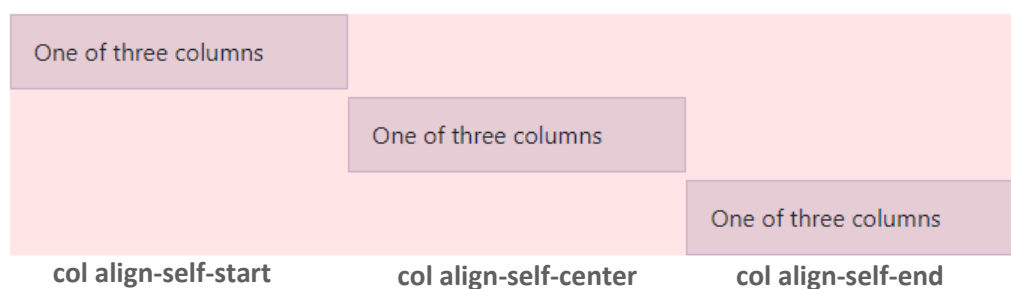

- **Variation – 2**

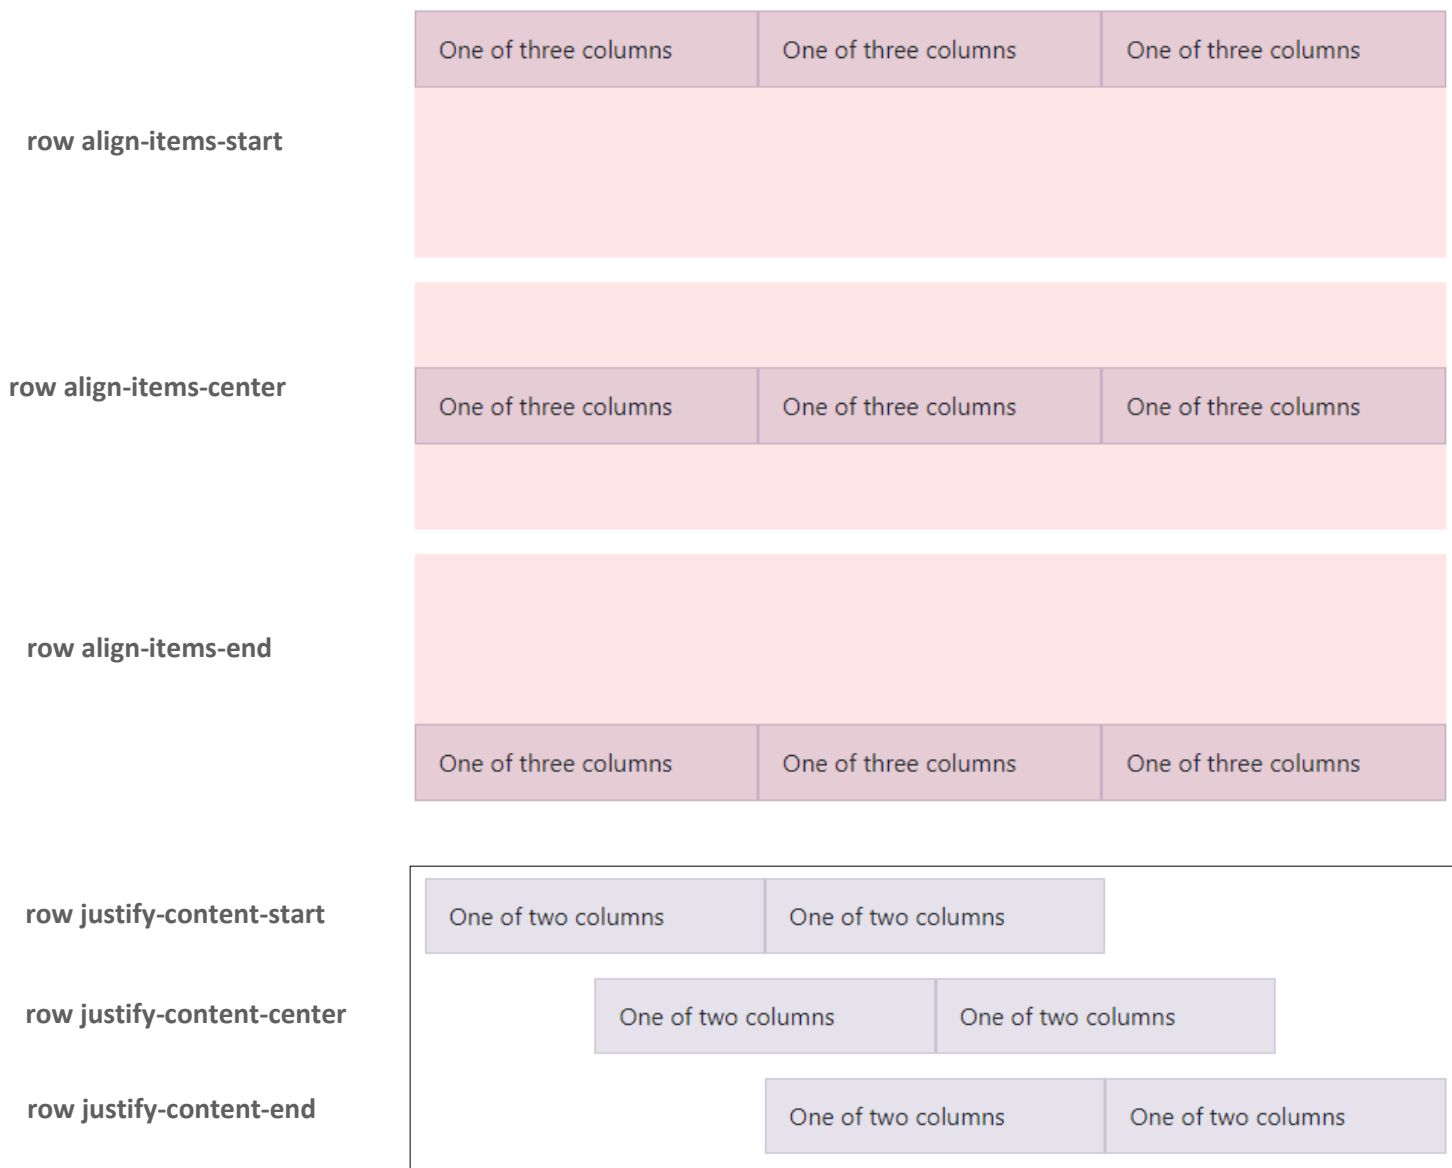

- Breakpoints** – col-sm, col-md, col-lg, col-xl
- Stacked to Horizontal** – (col-8, col-4), (col-sm-2, col-sm-6, col-sm-4),
- Mix and Match** – (col-6 col-sm-8 col-md-9, col-6 col-sm-4 col-md-3),

- **Variation – 3**

- Alignment** – (align-self-start, align-self-center, align-self-end),
(align-items-start, align-items-center, align-items-end),
(justify-content-start, justify-content-center, justify-content-end)

• Variation – 4

- Offset** – Move elements to the right. (offset-4, offset-sm-2, offset-md-3,)
- Margin & Padding**

Property -> m, p	m = margin p = padding
Sides -> t, b, l, r, x, y, blank	t = top b = bottom l = left r = right x = horizontal y = vertical
Size -> 0, 1, 2, 3, 4, 5, auto	0 = eliminate the margin 1 = \$spacer * .25 where \$spacer = 16px 2 = \$spacer * .5 3 = \$spacer 4 = \$spacer * 1.5 ; 5 = \$spacer * 3

Syntax: {property}{sides}-{size} {property}{sides}-{breakpoint}-{size}	To center align an element, mx-auto To shift rest of the elements to the right side, mr-auto To set a right margin with sm breakpoint, mr-sm-2 To set a padding of level 3, p-3 To set a top padding of level 2, pt-2
---	--

iii. **Nesting** – (row within row)

• **Variation - 5**

i. **Display**

value -> none, inline, inline-block, block etc.	none = To hide the element inline = To convert into inline elements inline-block = To convert into inline-block elements. block = To convert into block level elements.
Syntax: d-{value} d-{breakpoint}-{value}	To show an element from sm to extra large screen, d-sm-block To hide an element from md to extra large screen, d-sm-none

Display only xs screen, d-sm-none	Hide only xs screen, d-none d-sm-block	Display only on sm, d-none d-sm-block d-md-none
Display xs, sm screen, d-md-none	Hide only xs, sm screen, d-none d-md-block	Hide only on sm, d-sm-none d-md-block
Display xs, sm, md screen, d-lg-none	Hide only xs, sm, md screen, d-none d-lg-block	
Display xs, sm, md, lg screens, d-xl-none	Hide only xs, sm, md, lg screens, d-none d-xl-block	

• **Variation – 6**

i. **Text Operations**

Overflow:

- overflow-auto
- overflow-hidden

Box Shadow:

- shadow-none
- shadow-sm
- shadow
- shadow-lg

here **sm**, **lg** represents the shadow size.

Text:

- text-justify, text-sm-justify,
- text-left, text-sm-left,
- text-center, text-md-center,
- text-right, text-lg-right,
- text-decoration-none

Font:

- font-weight-bold
- font-weight-normal
- font-italic

• Variation – 7

i. Float and Clearfix

Float:

- float-left, float-sm-left, float-md-left,
- float-right, float-sm-right, float-md-right,
- float-none, float-sm-none, float-md-none,

Clearfix:

- clearfix

Carousel >>

```

```

```
<button type="button" class="btn btn-primary btn-block">Block level
button</button>
```

To group multiple buttons,

Left Middle Right

```
<div class="btn-group" role="group" aria-label="Basic example">
  <button type="button" class="btn btn-secondary">Left</button>
  <button type="button" class="btn btn-secondary">Middle</button>
  <button type="button" class="btn btn-secondary">Right</button>
</div>
```

Alerts >>

```
<div class="alert alert-success alert-dismissible fade show" role="alert">
  <strong>Congratulations!</strong> Your sign up is successful.
  Click this <a href="#" class="alert-link">link</a> to Log In.

  <button type="button" class="close" data-dismiss="alert" aria-label="Close">
    <span aria-hidden="true">&times;</span></button>
</div>
```

Success! This alert box indicates a successful or positive action.

Info! This alert box indicates a neutral informative change or action.

Warning! This alert box indicates a warning that might need attention.

Danger! This alert box indicates a dangerous or potentially negative action.

Primary! This alert box indicates an important action.

Secondary! This alert box indicates a less important action.

Dark! Dark grey alert box.

Light! Light grey alert box.

Breadcrumb >>

Home / Library / Data

```
<nav aria-label="breadcrumb">
  <ol class="breadcrumb">
    <li class="breadcrumb-item"><a href="#">Home</a></li>
    <li class="breadcrumb-item"><a href="#">Library</a></li>
    <li class="breadcrumb-item active" aria-current="page">Data</li>
  </ol>
</nav>
```

Jumbotron >>

A lightweight, flexible component that can optionally extend the entire viewport to showcase key marketing messages on your site. It is a simple **Hero Unit** where blocks are large visual elements that are meant to grab attention and showcase key content.

Hello, world!

This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.

It uses utility classes for typography and spacing to space content out within the larger container.

Learn more

```
<div class="jumbotron">
  <h1>Hello, world!</h1>
  <p>This is a simple hero unit, a simple jumbotron-style component for
    calling extra attention to featured content or information.</p>
  <hr class="my-4">
  <p>It uses utility classes for typography and spacing to space content out
    within the larger container.</p>
  <a class="btn btn-primary btn-lg" href="#" role="button">Learn more</a>
</div>
```

Modal >>

```
<!-- Button trigger modal -->
<button type="button" class="btn btn-primary" data-toggle="modal" data-
target="#exampleModal">
  Launch demo modal
</button>

<!-- Modal -->
<div class="modal fade" id="exampleModal" tabindex="-1" role="dialog" aria-
labelledby="exampleModalLabel" aria-hidden="true">
  <div class="modal-dialog">
    <div class="modal-content">
      <div class="modal-header">
        <h5 class="modal-title" id="exampleModalLabel">Modal title</h5>
        <button type="button" class="close" data-dismiss="modal" aria-label="Close">
          <span aria-hidden="true">&times;</span>
        </button>
      </div>
      <div class="modal-body">
        ...
      </div>
      <div class="modal-footer">
        <button type="button" class="btn btn-secondary" data-dismiss="modal">Close
      </button>
        <button type="button" class="btn btn-primary">Save changes</button>
      </div>
    </div>
  </div>
</div>
```

To stop outside click functionality:

```
<div class="modal fade" id="staticBackdrop" data-backdrop="static" data-keyboard="false"
tabindex="-1" role="dialog" aria-labelledby="staticBackdropLabel" aria-hidden="true">
  ...
</div>
```

To make the modal body scrollable:

```
<!-- Scrollable modal -->
<div class="modal-dialog modal-dialog-scrollable">
  ...
</div>
```

To vertically center the modal position:

```
<!-- Vertically centered modal -->
<div class="modal-dialog modal-dialog-centered">
  ...
</div>
```

<p>Textual Form Controls:</p> <pre><input type="text"> <input type="email"> <input type="url"> <input type="search"> <input type="password"></pre>	<pre><div class="form-group"> <label for="id">Email address</label> <input type="email" class="form-control" id="id"> <small id="helptext" class="form-text text-muted"> We'll never share your email with anyone else. </small> </div></pre> <ul style="list-style-type: none"> For plain text, use <code>.form-control-plaintext</code> Use <code>.form-group row</code> and grid columns (<code>.col</code>, <code>.col-3</code>) for horizontally align the elements within the form group. <pre><div class="form-group row"> <label for="id1" class="col-sm-2 col-form-label">Email</label> <div class="col-sm-10"> <input type="email" class="form-control" id="id1"> </div> </div></pre>

</div>
```

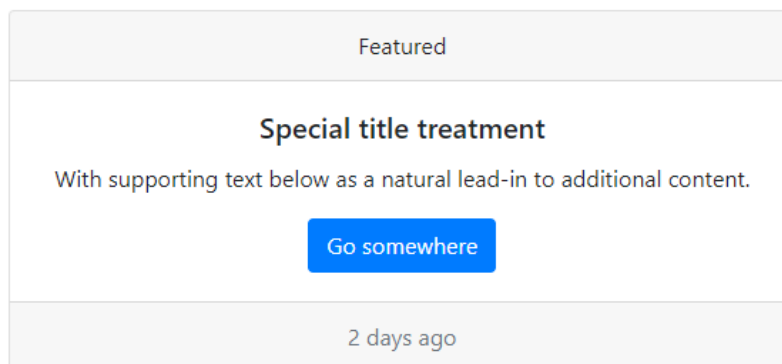

To add card subtitle within card body,

```
<h6 class="card-subtitle mb-2 text-muted">Card subtitle</h6>
```

To add card header, footer section:

```
<div class="card text-center">
  <div class="card-header">
    Featured
  </div>
  <div class="card-body">
    <h5 class="card-title">Special title treatment</h5>
    <p class="card-text">With supporting text below as a natural lead-in to
      additional content.</p>
    <a href="#" class="btn btn-primary">Go somewhere</a>
  </div>
  <div class="card-footer text-muted">
    2 days ago
  </div>
</div>
```

output:

To create image overlay,

```
<div class="card bg-dark text-white">
  
  <div class="card-img-overlay">
    <h5 class="card-title">Card title</h5>
    <p class="card-text">This is a wider card with supporting text below as a
      natural lead-in to additional content. This content is a little bit longer.</p>
    <p class="card-text">Last updated 3 mins ago</p>
  </div>
</div>
```

output:

Card title

This is a wider card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Last updated 3 mins ago

Card image

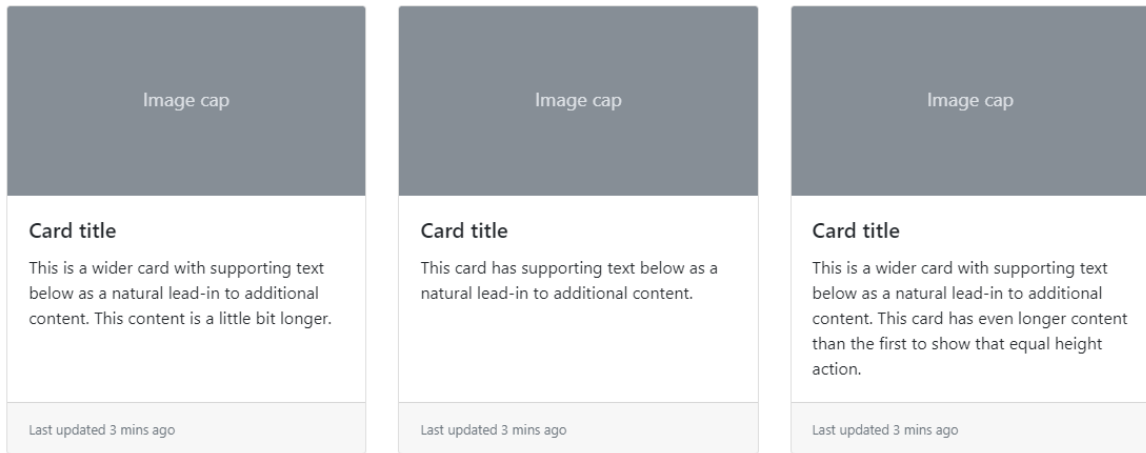

To create a deck of cards,

```
<div class="card-deck">
  <div class="card">
    
    <div class="card-body">
      <h5 class="card-title">Card title</h5>
      <p class="card-text">This is a wider card with supporting text below as a natural
lead-in to additional content. This content is a little bit longer.</p>
    </div>
    <div class="card-footer">
      <small class="text-muted">Last updated 3 mins ago</small>
    </div>
  </div>

  <div class="card">
    
    <div class="card-body">
      <h5 class="card-title">Card title</h5>
      <p class="card-text">This card has supporting text below as a natural lead-in to
additional content.</p>
    </div>
    <div class="card-footer">
      <small class="text-muted">Last updated 3 mins ago</small>
    </div>
  </div>

  <div class="card">
    
    <div class="card-body">
      <h5 class="card-title">Card title</h5>
      <p class="card-text">This is a wider card with supporting text below as a natural
lead-in to additional content. This card has even longer content than the first to show
that equal height action.</p>
    </div>
    <div class="card-footer">
      <small class="text-muted">Last updated 3 mins ago</small>
    </div>
  </div>
</div>
```

output:
